1 Powerful Package

In the **Browse** mode, you can view your images and data sequentially or you can jump to a particular record. Just click on the image to bring up the full resolution image.

For faster viewing, use the **Thumb** feature to display either 6 or 12 images at a time. Click on an image to bring up the full record in the **Browse** mode, or use the **Show** and **Print** buttons to instantly create contact sheets.

Even with thousands of images, *Image Central's* **Search** feature enables you to quickly subset a database to view images of interest. Type any character set into a field(s) and hit **Go**. *Image Central* will display just those records matching your search criteria. For more complex searches, click on **Special** and create your own multi-field searches, including Boolean, arithmetic, and comparative operators.

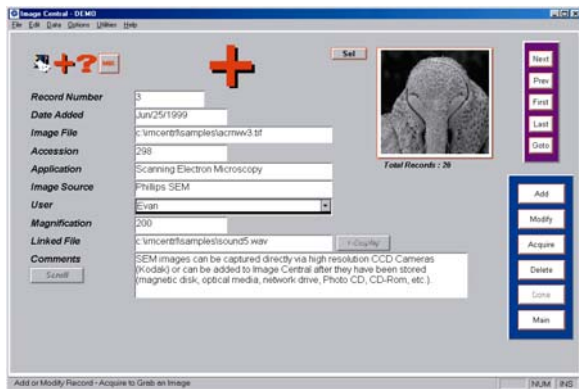

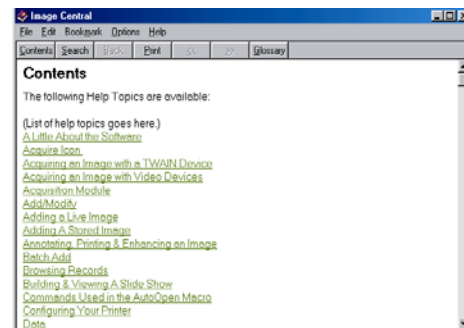

Image Central's **ADD/MODIFY** mode enables you to quickly modify any data field, Acquire images directly from any **TWAIN** Device, or add any digital image. Edit drop down lists and set directories for image and thumbnail storage locations. Image Central supports all major file formats. Use "**SEL**" button to left of snapshot image to quickly tag records for sorting, deleting or copying.

With Image Central Simple Image Management and Automatic Report Generation are at your fingertips. Send an image to your favorite application at the touch of a button.

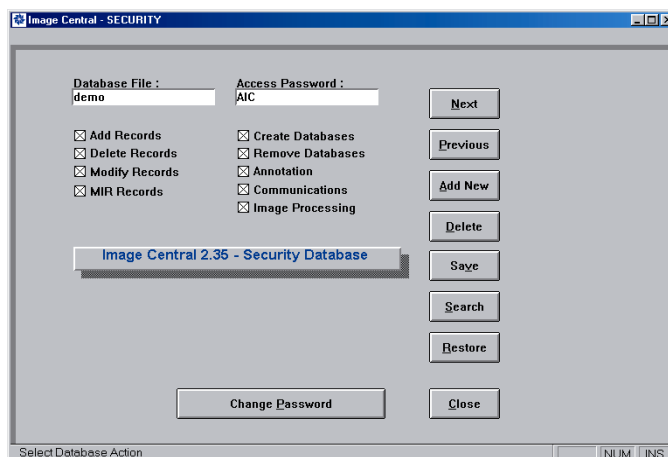

The exceptional ease of use is augmented by complete on-line **Hypertext Help**, which provides fast answers to your questions about any aspect of *Image Central*.

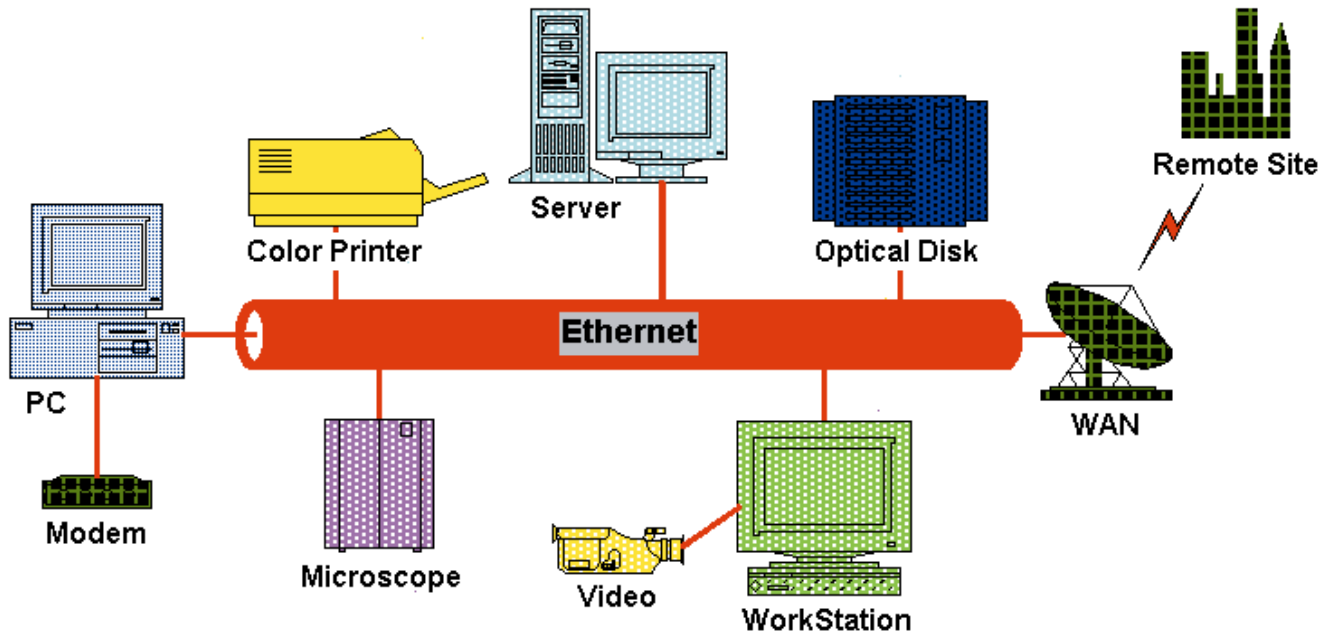

THE ELECTRONIC PHOTO ALBUM OF THE FUTURE IS HERE TODAY!

Clicking on the *snapshot* from either **BROWSE** or **ADD/MODIFY** screens brings you to the **Full View** display. From here you can Annotate, Enhance, Compare side by side, Display full screen, Overlay Data, and Print your full resolution image.

Designed from the start as a fully networked package, *Image Central's Security Database* with *Multilevel Feature-Specific Password Protection* allows complete control for access to and privileges within any of your databases. The optional Audit Trail with "reason for change box" ensures that the data is secure and all changes are tracked.
