

ProgRes® CCD *SpeedXT^{core}* Cameras

Reach your goal faster with *SpeedXT^{core}* technology

Breakthrough in CCD speed

ProgRes® *SpeedXT^{core} 3* and *SpeedXT^{core} 5* are the first to feature Jenoptik's innovative *SpeedXT^{core}* technology providing very fast live speed rates of 17 fps / 13 fps in full resolution of 3 / 5 mega pixel. Due to the enhancement of the live image speed in combination with the high resolution the user is enabled to facilitate precise focusing and easy positioning of specimens without interlace effect in a more efficient way - a clear advantage in the analysis of moving objects and routine work in laboratories.

Exposure times up to 180 s ensure optimum captured images, also under low-light conditions. The maximum possible color depth is 36 bit.

Superior color reproduction

An excellent color reproduction as well as ease of installation & operation are other distinguishing features of the cameras.

The software can be easily and quickly installed, enabling users to immediately capture brilliant images in excellent, acknowledged Jenoptik quality providing finest color gradings for sophisticated applications.

Benefits

- *SpeedXT^{core}* – outstanding CCD live image speed for easy focussing
- Excellent image quality and high resolution
- Perfect color reproduction
- ProgRes® Capture software for easy operation included
- Easy and fast installation
