

Vibration Isolation Table

VIT Series 2500

Vistek isolation technology is superior to air technology. First, Vistek vibration isolation platforms are passive, mechanical and maintenance free. There are no air hoses or supporting hardware required. Second, Vistek bearings isolate effectively for the horizontal and vertical vibration components. The superior performance of the Vistek bearings in all six degrees of freedom makes the Vistek isolation legs the best choice for eliminating unwanted vibrations.

The Vistek Series 2500 Vibration Isolation Table (VIT 2500) is an exceptionally rigid, elegant, table built with extruded anodized aluminum shapes. Designed for the microscope user, vibration isolation is provided only where you need it, which is beneath the microscope and recessed within the table. This makes it possible to perform critical microscopic observations and use the work surface at the same time, without any workflow interruption.

These tables are available in widths of 36", 42", 48", and 60" to help accommodate laboratory space requirements. The microscope isolation platform may be located on the left side, center, or right side of the tabletop, depending on the application.

Check with your local microscope dealer for price and delivery.
